## Contents

**Foreword**  xv  

### Section 1. General

1.1 Scope  1/1  
1.2 Interpretation  1/3  
1.3 Definitions  1/3  
1.4 Responsibilities  1/4  
1.4.1 Responsibilities of the purchaser  1/4  
1.4.2 Responsibilities of the manufacturer  1/5  
1.4.3 Responsibilities of the Inspecting Authority  1/9  
1.4.4 Certificate of Conformance  1/9  
1.5 Information and requirements to be agreed and to be documented  1/12  
1.5.1 Information to be supplied by the purchaser  1/12  
1.5.2 Information to be supplied by the manufacturer  1/12  
1.6 Thicknesses  1/13  

### Section 2. Materials

2.1 Selection of materials  2/1  
2.1.1 General  2/1  
2.1.2 Materials for pressure parts  2/1  
2.1.3 Materials for non-pressure parts  2/24  
2.2 Materials for low temperature applications  2/24  
2.3 Nominal design strength  2/26  
2.3.1 General  2/26  
2.3.2 Notation  2/27  
2.3.3 Time-independent design strength  2/27  
2.3.4 Time-dependent design strength  2/29  

### Section 3. Design

3.1 General  3/1  
3.2 Application  3/2  
3.2.1 Consideration of loads  3/2  
3.2.2 Design criteria  3/3  
3.2.3 Design pressure  3/4  
3.2.4 Maximum design temperature  3/4  
3.2.5 Minimum design temperature  3/5  
3.2.6 Thermal loads  3/5  
3.2.7 Wind and earthquake loads  3/5  
3.3 Corrosion, erosion and protection  3/5  
3.3.1 General  3/5  
3.3.2 Additional thickness to allow for corrosion  3/6  
3.3.3 Linings and coatings  3/6  
3.3.4 Wear plates  3/6  
3.4 Construction categories and design stresses  3/7  
3.4.1 Construction categories  3/7  
3.4.2 Design stresses  3/8  
3.5 Vessels under internal pressure  3/9  
3.5.1 Cylindrical and spherical shells  3/9  
3.5.2 Dished ends  3/11  
3.5.3 Cones and conical ends  3/16  
3.5.4 Openings and nozzle connections  3/24  
3.5.5 Flat ends and flat plates  3/77  
3.5.6 Spherically domed and bolted ends of the form shown in Figure 3.5-39  3/89  
3.6 Vessels under external pressure  3/96  
3.6.1 General  3/96  
3.6.2 Cylindrical shells  3/99  
3.6.3 Conical shells  3/104  

© The British Standards Institution 2012  •  i
3.6.4 Spherical shells 3/107
3.6.5 Hemispherical ends 3/107
3.6.6 Torispherical ends 3/107
3.6.7 Ellipsoidal ends 3/108
3.6.8 Procedure by which the departure from the mean circle may be obtained 3/108
3.7 Supports, attachments and internal structures 3/133
3.7.1 General 3/133
3.7.2 Supports 3/133
3.8 Bolted flanged connections 3/134
3.8.1 General 3/134
3.8.2 Notation 3/142
3.8.3 Narrow-faced gasketted flanges 3/144
3.8.4 Full-faced flanges with soft ring type gaskets 3/151
3.8.5 Ungasketted seal welded flanges 3/152
3.8.6 Reverse narrow-face flanges 3/152
3.8.7 Reverse full-face flanges 3/153
3.8.8 Full-faced flanges with metal to metal contact 3/154
3.9 Flat heat exchanger tubesheets 3/196
3.9.1 Notation 3/196
3.9.2 Characteristics of perforated plates 3/199
3.9.3 Tubesheets of exchangers with floating heads or U-tubes 3/201
3.9.4 Tubesheets of fixed tubesheet exchangers 3/210
3.9.5 Allowable shell and tube longitudinal stresses 3/217
3.9.6 Allowable tube joint end load 3/218
3.9.7 Tubesheet flanged extension with narrow-face gasket 3/219
3.10 Design of welds 3/222
3.10.1 General 3/222
3.10.2 Welded joints for principal seams 3/223
3.10.3 Welded joints for other than principal seams 3/225
3.10.4 Welded joints in time dependent applications 3/226
3.11 Vessels with external jackets or limpet coils 3/226
3.11.1 General 3/226
3.11.2 Jacketted cylindrical shells 3/226
3.11.3 Welded jacket connections 3/227
3.11.4 Cylindrical shells with limpet coils 3/230
3.12 Manholes, inspection openings and quick release openings 3/232
3.13 Protective devices for excessive pressure or vacuum 3/232
3.13.1 Application 3/232
3.13.2 Capacity of relief device(s) 3/233
3.13.3 Pressure setting of pressure relieving devices 3/233

Section 4. Manufacture and workmanship
4.1 General aspects of construction 4/1
4.1.1 General 4/1
4.1.2 Material identification 4/1
4.1.3 Order of completion of weld seams 4/2
4.1.4 Junction of more than two weld seams 4/2
4.1.5 Localized thinning 4/2
4.1.6 Rectification of departures from tolerance 4/2
4.2 Cutting, forming and tolerances 4/2
4.2.1 Cutting of material 4/2
4.2.2 Forming of shell sections and plates 4/3
4.2.3 Assembly tolerances 4/6
4.2.4 Tolerances for vessels subject to internal pressure 4/7
4.2.5 Tolerances for vessels subject to external pressure 4/11
4.2.6 Structural tolerances 4/12
4.3 Welded joints 4/12
4.3.1 General 4/12
4.3.2 Welding consumables 4/12
4.3.3 Preparation of plate edges and openings 4/13
4.3.4 Assembly for welding 4/13
4.3.5 Attachments and the removal of temporary attachments 4/13
4.3.6 Butt joints 4/14
4.3.7 Welding: general requirements 4/15
4.4 Heat treatment 4/15
4.4.1 Preheat requirements 4/15
4.4.2 Normalizing: ferritic steels 4/16
4.4.3 Post-weld heat treatment 4/16
4.4.4 Methods of heat treatment 4/17
4.4.5 Post-weld heat treatment procedure 4/18
4.4.6 Mechanical properties after heat treatment 4/21
4.5 Surface finish 4/22

Section 5. Inspection and testing
5.1 General 5/1
5.2 Approval testing of fusion welding procedures 5/2
5.3 Welder and operator approval 5/5
5.4 Production control test plates 5/6
5.4.1 Vessels in materials other than 9% Ni steel 5/6
5.4.2 9% Ni steel vessels 5/6
5.5 Destructive testing 5/6
5.6 Non-destructive testing 5/7
5.6.1 General 5/7
5.6.2 Parent materials 5/7
5.6.3 Components prepared for welding 5/8
5.6.4 Non-destructive testing of welded joints 5/8
5.6.5 Choice of non-destructive test methods for welds 5/11
5.6.6 Non-destructive testing techniques for welds 5/11
5.7 Acceptance criteria for weld defects revealed by visual examination and non-destructive testing 5/14
5.7.1 General 5/14
5.7.2 Assessment of defects 5/14
5.7.3 Repair of welds 5/15
5.8 Pressure tests 5/24
5.8.1 General 5/24
5.8.2 Basic requirements 5/24
5.8.3 Hydraulic testing 5/26
5.8.4 Pneumatic tests 5/26
5.8.5 “Standard” test pressure 5/27
5.8.6 Proof hydraulic test 5/29
5.8.7 Combined hydraulic/pneumatic tests 5/31
5.8.8 Leak testing 5/31
5.8.9 Vessel nameplate 5/32
5.8.10 Final inspection 5/32
5.9 Inspection requirements for cast components 5/33
5.9.1 Examination 5/33
5.9.2 Defects 5/33
5.9.3 Identification and marking 5/33

Annexes
Annex A: Requirements for design where loadings and components are not covered by Section 3 A/1
Annex B: Requirements for cylindrical, spherical and conical shells under combined loadings, including wind and earthquakes B/1
Annex C: Assessment of vessels subject to fatigue C/1
Annex D: Requirements for vessels designed to operate below 0°C D/1
Annex E: Recommendations for welded connections of pressure vessels E/1
Annex G: Recommendations for the design of local loads, thermal gradients, etc. G/1
Annex H: Recommendations for post-weld heat treatment of dissimilar ferritic steel joints H/1
Annex J: Recommendations for pressure relief protective devices J/1
Annex K: Requirements for design stresses for British Standard materials K/1
Annex L: Guidance on structural tolerances L/1
Annex M: Requirements for establishing the allowable external pressure for cylindrical sections outside the circularity limits specified in 3.6 M/1
Annex N: Requirements for vessel design and the provision of information concerning UK statutory requirements for the demonstration of the continued integrity of pressure vessels throughout their service life N/1
Annex Q: Recommendations for preparation and testing of production control test plates Q/1
Annex R: Guidance on additional information for flat ends and flat plates R/1
Annex S: Guidance on optional documentation for supply with vessel S/1
Annex T: Recommendations for arc welded tube to tubeplate joints T/1
Annex U: Guidance on the use of fracture mechanics analyses U/1
Annex V: Requirements for testing and inspection of serially produced pressure vessels V/1
Annex W: Worked examples W/1
Annex Z: Guidance on the application of PD 5500 to pressure vessels falling within the scope of the European Pressure Equipment Directive Z/1

Supplements
Aluminium supplement: Requirements for aluminium and aluminium alloys in the design and construction of unfired fusion welded pressure vessels Al/1
Copper supplement: Requirements for copper and copper alloys in the design and construction of unfired fusion welded or brazed pressure vessels Cu/1
Nickel supplement: Requirements for nickel and nickel alloys in the design and construction of unfired fusion welded pressure vessels Ni/1
Titanium supplement: Requirements for titanium and titanium alloys in the design and construction of unfired fusion welded pressure vessels Ti/1

Summary of pages
This document comprises a front cover, an inside front cover, pages i to xvi, pages 1/1 to 5/34, pages A/1 to Z/10, pages Al/1 to Ti/7, pages I to XIV, an inside back cover and a back cover.
Foreword

This Published Document is published by BSI Standards Limited, under licence from The British Standards Institution, and came into effect on 30 June 2012, to supersede PD 5500:2009+A3:2011. It provides a specification for the design, manufacture, inspection and testing of pressure vessels manufactured from carbon, ferritic alloy and austenitic steels, nickel and aluminium.

The form and content of the original issue of PD 5500 was derived, without technical amendment, from the 1997 edition of BS 5500, Specification for unfired fusion welded pressure vessels, and all amendments issued thereto, up to and including No. 6 (September 1999). At the time PD 5500 differed from BS 5500 only insofar as it did not retain the latter’s status as a national standard. This specification is thus, founded on the experience derived from the application of BS 5500 and the first edition of PD 5500, providing an integrated set of rules which have been shown to provide vessels of suitable integrity for a wide range of duties and risk environments.

BS 5500:1997 was withdrawn because its status as a national standard was incompatible with BSI’s obligations to CEN consequent to the development of the European Standard EN 13445, Unfired pressure vessels. That European Standard was first published in May 2002. A new edition of EN 13445 was published in July 2009.

The process of development of EN 13445 by CEN and its reference in the Official Journal of the European Communities creates, for equipment which conforms to that standard, a presumption of conformity with the essential safety requirements of the EU’s pressure equipment directive, 97/23/EC (see article 5 of that directive). This Published Document does not provide that presumption of conformity. However, this Published Document can be used, for vessels within the scope of directives, subject to:

– adherence of the directive’s conformity assessment requirements;
– the manufacturer satisfying himself that this PD covers all the technical requirements of the Directive relevant to the vessel in question.

This use may be to cover the full range of applicable vessel requirements or to cover an issue not, at the time, appropriately supported in EN 13345.

The normative form of wording is used in this Published Document, even though this does not have the status of a national standard, in order to ensure clarity in the definition of its requirements and recommendations.

Reference is made in the text to a number of standards which have been withdrawn. Such standards are identified in the list of references (see page V). Consideration is currently being given as to whether replacement standards are available or are being developed, for example, in the European programme, and to the implications for PD 5500 of such replacement standards. When a decision is made about any replacements standards, these will be identified by the issue of an amendment.

The British Standards Institution will be pleased to receive constructive proposals based on experience or research that may lead to improvements in this Published Document. PVE/1 intends to keep the content and technical status of this specification under review along with the need to publish appropriate supplements covering other types of pressure vessels. If there is sufficient demand from industry, this Published Document will be extended to cover other non-ferrous materials.
The requirements for materials not listed in Section 2. Materials, are given in supplements to the main text, which are to be read in conjunction with the main text so as to provide comprehensive requirements for pressure vessels produced in the relevant material. Annexes to the main text are provided which can be either normative (i.e. requirements) or informative (i.e. recommendations). These annexes can include additional requirements to the main text or informative guidance or recommendations, or can provide worked examples. Enquiry cases are published primarily to give guidance and clarification of possible ambiguities in the main text and will be incorporated into the main text or into an annex at an appropriate stage. Some Enquiry cases are published to provide new information and are identified as “preliminary rules”.

It should be noted that the effective date of amendments to this Published Document will be later than the publication date to allow users time to amend their own working procedures and documentation. See the introduction to the summary of pages table.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a Published Document cannot confer immunity from legal obligations.
Section 1. General

1.1 Scope

1.1.1 This Published Document specifies requirements for the design, construction, inspection, testing and verification of compliance of new unfired fusion welded pressure vessels. The materials of construction are specified in Section 2. The term “pressure vessel” as used in this specification includes branches up to the point of connection to the connecting piping by bolting, screwing or welding, and supports, brackets or other attachments directly welded to the pressure containing shell. The term “unfired” excludes vessels that are subject to direct generated heat or flame impingement from a fired process. It does not exclude vessels subject to electrical heating or heated process streams.

NOTE Whilst this specification is limited to the construction of new vessels, with the agreement of the relevant parties it can be used to guide the maintenance or any modification of existing vessels. Where these existing vessels were designed and constructed using an earlier edition of PD 5500, with the agreement of the relevant parties, that earlier edition can be used to guide the maintenance or any modification.

1.1.2 In addition to the definitive requirements this specification also requires the items detailed in 1.5 to be documented. For compliance with this specification, both the definitive requirements and the documented items have to be satisfied.

1.1.3 This specification applies only to pressure vessels manufactured under the survey of a competent engineering Inspecting Authority or Organization. The competent engineering Inspection Authority or Organization shall either be:

a) a notified body appointed by a member state of the European Union for the Pressure Equipment Directive 97/23/EC for the range of activities covered by this specification; or

NOTE Within the UK the United Kingdom Accreditation Service (UKAS) acts on behalf of the regulating authority in accrediting inspection bodies.

b) accredited to BS EN 45004, to Type A independence criteria, for inspection in the subject matter of this specification; or

c) accredited by an organization authorized by the local Regulatory Authority in countries outside the EU and in circumstances where the Pressure Equipment Directive 97/23/EC does not apply.

The intent of this requirement is regarded as satisfied where inspection is carried out by competent personnel of a separate engineering inspection department maintained by the purchaser of the vessel (in which case Type B independence criteria shall be met). An inspection department maintained by the manufacturer does not satisfy this requirement except:

a) that specific responsibilities may be delegated at the discretion of the Inspecting Authority or Organization; or

b) in the case of vessels for the manufacturer’s own use and not for resale.

This specification applies only to vessels made by manufacturers who can satisfy the Inspecting Authority or Organization that they are competent and suitably equipped to fulfil the appropriate requirements of this specification.

The requirements for testing and inspecting serially manufactured pressure vessels are given in Annex V. In all other respects the appropriate requirements in the specification apply.
